Program: Child Abuse Library Online Logic Model

Situation: Child abuse and neglect is a major, continuing public health problem, with high public visibility and concern. Professionals working in fields related to child abuse require authoritative and research-based information for decision making and best practices, but lack local access to that information. NCAC is positioned and tasked with meeting that need through training and information dissemination programs designed to achieve Research into Practice.

Priorities:
- Highest quality knowledge resources
- Easily identified and retrieved
- Documents, not citations

Activities

Participants

Searchable collections of resources

Custom-developed Web-based information

Telephone and email reference services

Online tutorials and classroom training

Blogs, social media and other information services

Bibliographies and topical guidance

External Factors

- Little or no access to professional publications
- Small organizations with limited resources

Assumptions CALiO users:
- Educated, but not experts at locating best resources to guide evidence-based practice.
- Seek research information rarely.
- Seek very specific information for decision-making and practical knowledge.

Outcomes

Intermediate

Long term

CALiO™ use increases

Professional knowledge of evidence-based practices increases

Increased conviction rate of perpetrators

Application of best practices and evidence-based knowledge

Reduction in incidence of child abuse and neglect

Improved parenting and family cohesiveness

More and better research on child abuse and neglect
